S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Medio físico: Relieves calcáreos abruptos. Gran singularidad geológica formada por conglomerados del cenozoico; en la zona central, justo encima de la pequeña población de Mora Condal se encuentran los Artigues o encantades, singular formación geológica de similares características a las de Montserrat. Elevado interés paisajístico por la singularidad de las formaciones de conglomerados en el contexto del Prepirineo. Interés biogeográfico de la vegetación (tejo, boj, acebo) y tranquilidad del lugar para la fauna rupícola.

4.2 Quality and importance

El espacio presenta interés por constituir un área de transición entre los sistemas naturales del Prepirineo central y el oriental. Constituye un relieve perfectamente aislado que ha permitido el buen estado de conservación de sus elementos, destacando los pinares de *Pinus nigra* y comunidades pirenaicas en situación meridional avanzada. Especies eurosiberianas y orófitos raros en Catalunya
