Other Site Characteristics

Morfológicamente, la ZEC Andévalo Occidental tiene unos rasgos muy homogéneos. Desde la orogenia hercínica hasta la actualidad, se han desarrollado extensas superficies de aplanamiento erosionadas por la red fluvial cuaternaria. Sobre este conjunto se hallan relieves residuales, debidos a una contrastada constitución litológica, destacando las cuarcitas frente a la abundancia de pizarras y esquistos. En cuanto a los georrecuros, se localizan las Turbiditas de la Vía Verde del Guadiana en el municipio de El Granado (ejemplo de flysch en la zona subportuguesa del macizo ibérico) y la Hoz del Guadiana en Sanlúcar en El Granado y Sanlúcar del Guadiana (cañón fluvial de gran interés turístico y educativo).

4.2 Quality and importance

Importante para lince (Lynx pardina) y peces de la Directiva 92/43/CEE. Existen grandes extensiones de dehesas sobre todo de Quercus ilex. Presenta abundante población de conejos lo que contribuye a que se considere zona lincera y de dispersion de juveniles de Aguila imperial nacidas en Doñana. En la sección 3.3 se ha mencionado el motivo D cpm respecto a la especie Passer domesticus la cual está presente en la UICN 2011. Lista Roja de las especies amenazadas de la UICN. Versión 2011.2 - Preocupación Menor
