Jornadas Técnicas de Gestores de Calidad del Aire

AIRUSE

OBJETIVOS

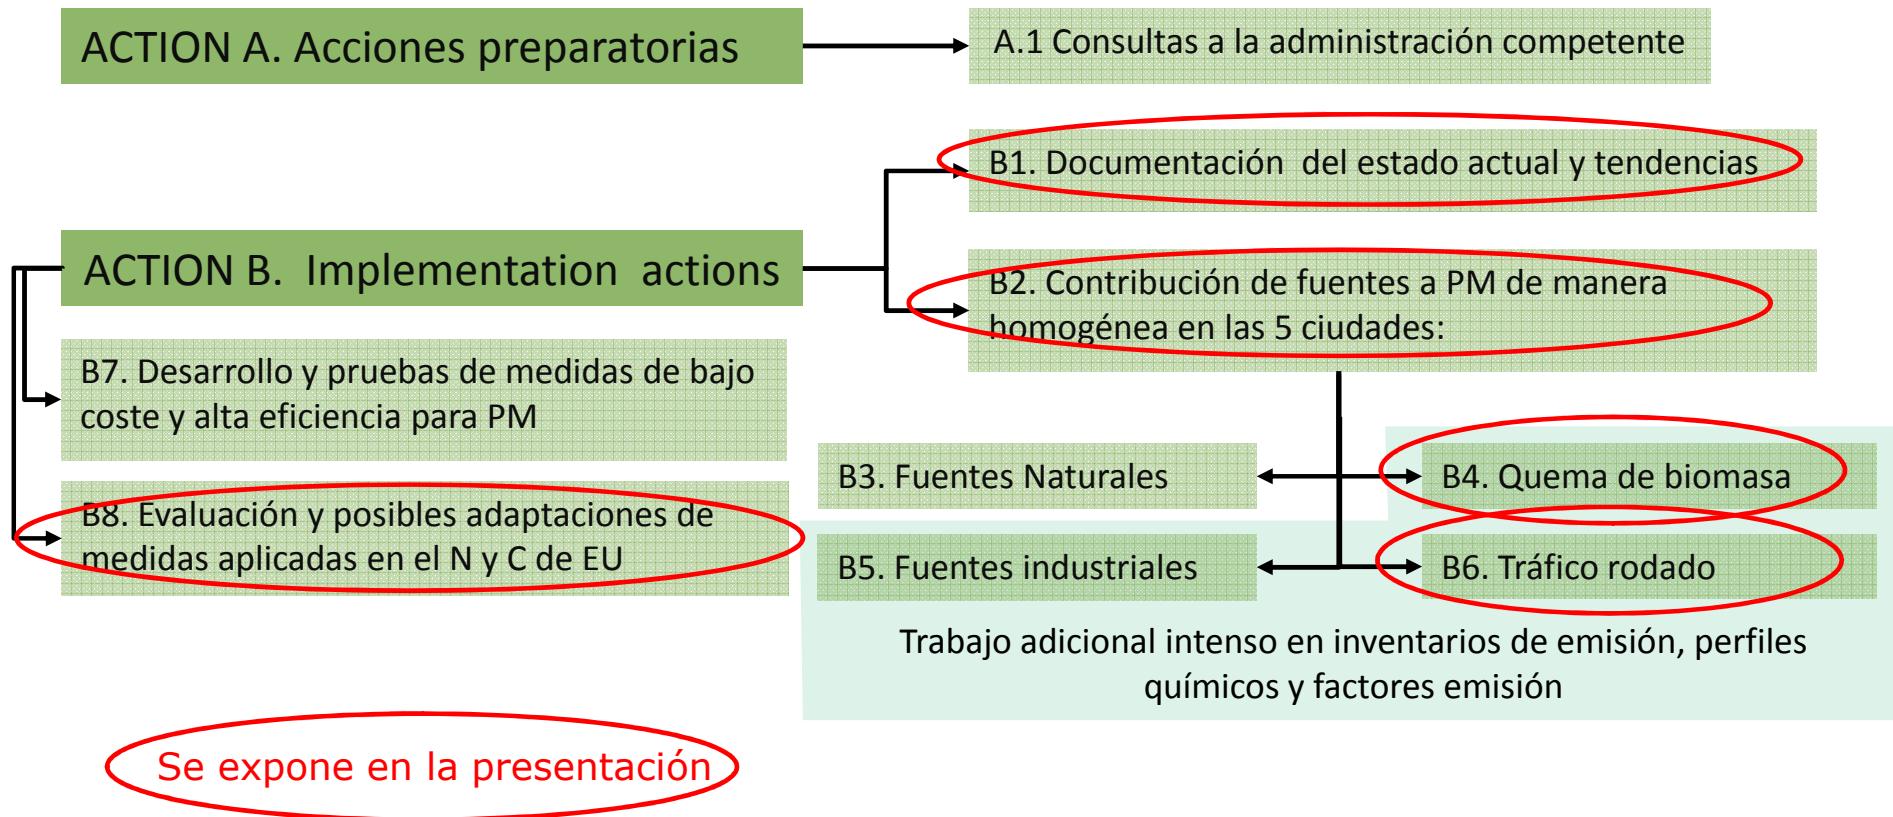

- Identificar similitudes y diferencias en contribución de fuentes a PM en el S-EU (**5 ciudades**)
- Una vez identificadas fuentes clave de PM10 and PM2.5 el objetivo estratégico de AIRUSE es **el desarrollo, pruebas y propuestas de medidas específicas y no específicas para entornos urbanos del S-EU que permitan alcanzar los valores guía y límite OMS-UE**

Medidas de PM específicas

- Lavado y aspiración vías de tráfico y aplicación supresores de polvo de rodadura y polvo africano
- Reducción de emisiones de quema de biomasa
- Reducción de emisiones canalizadas y fugitivas del sector industrial
- Evaluar estrategias de otra regiones europeas (ZBE, vehículos eco-eficientes, etiquetados, buques, biomasa)

Standards need to be established in the EU for elemental composition of commercial wood pellets and chips to avoid the inclusion of extraneous materials. Only Germany has standards containing extensive trace element limits.

Diesel car PM Emissions

Remote Sensing of Vehicle Emissions (Leeds autumn/winter 2014)

Source: James Tate, University of Leeds, 2015

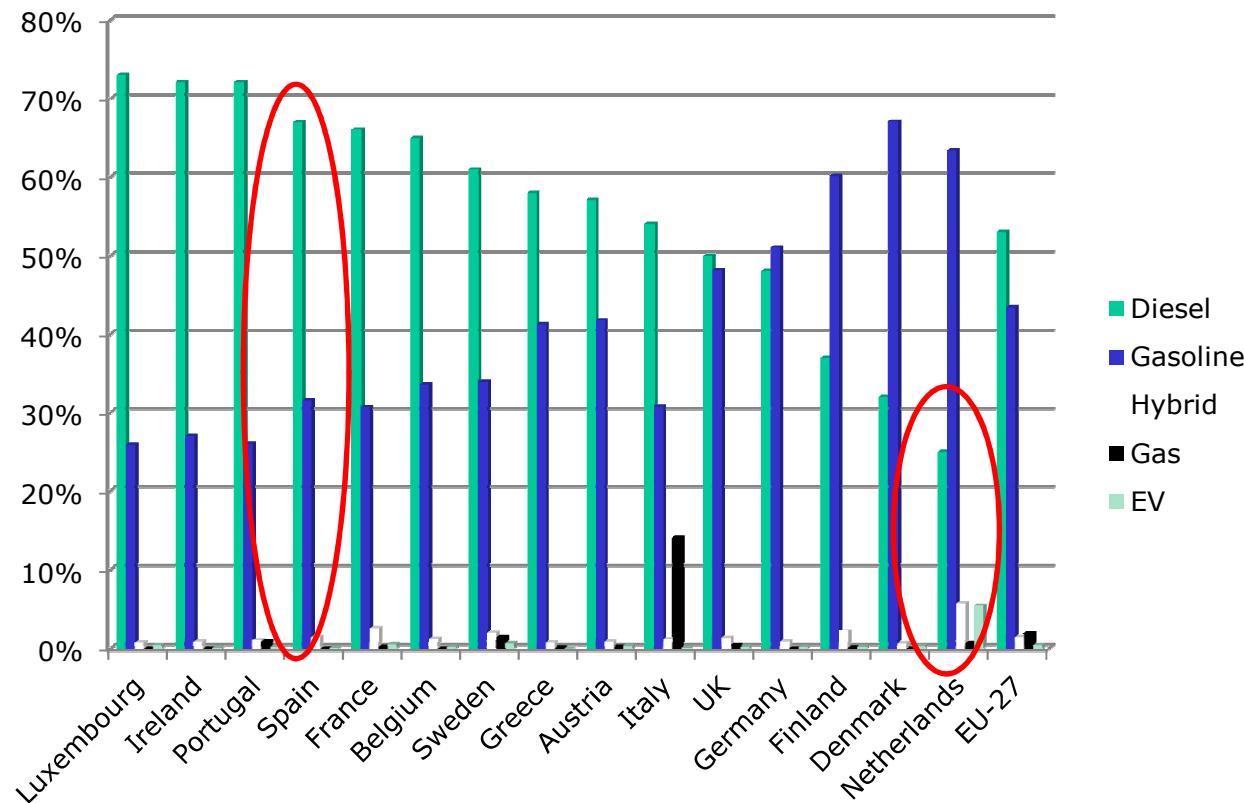

- Average Euro 6 NOx seven times the type approval limit (ICCT, 2014)
- Some Euro VI buses continue to have high in-use NOx emissions, depending on exhaust T (Carslaw et al, 2014)

B8: ESTRATEGIAS Y ACTUACIONES DEL NORTE Y CENTRO DE LA UE: EVALUACIÓN Y ADAPTACIÓN

B8: MITIGATION MEASURES – THE EXPERIENCE OF NORTHERN AND CENTRAL EUROPE

Efficacy of LEZs

- Difficult to determine
- Confounding factors e.g. weather, other policy measures, recession
- Little evidence of impact on PM₁₀ and NO₂ concentrations outside Germany
- EC/BC reduced

B8: ESTRATEGIAS Y ACTUACIONES DEL N Y CENTRO DE LA UE: EVALUACIÓN Y ADAPTACIÓN

Efficacy of German LEZs

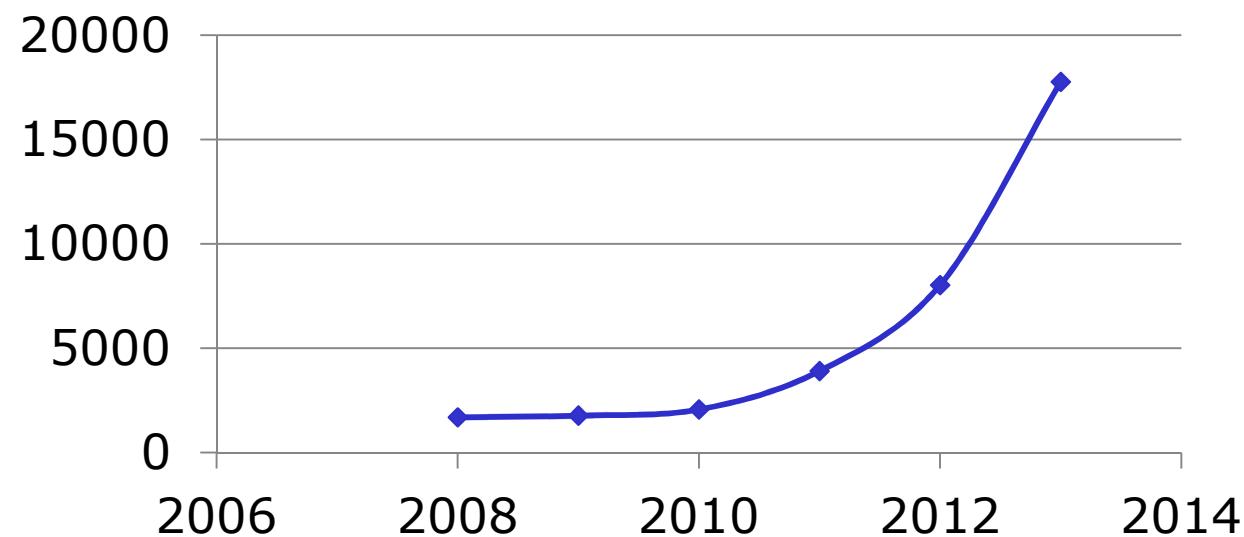

- $\text{PM}_{10} \leq 7\% \downarrow$
- Munich (LEZ + HDV ban) PM_{10} ca. 13% \downarrow and $\text{NO}_2 \leq 10\% \downarrow$
- But not all robust studies
- Early phases studied
- LEZs apply to cars as well as HDVs
- Generally more stringent than elsewhere

B8: ESTRATEGIAS Y ACTUACIONES DEL NORTE Y CENTRO DE LA UE: EVALUACIÓN Y ADAPTACIÓN

Electric car market in Norway

Norway: New Electric Cars Sales

Norway 5.8%; Netherlands 5.4%; EU-28 0.4% (2013)

B8: ESTRATEGIAS Y ACTUACIONES DEL NORTE Y CENTRO DE LA UE: EVALUACIÓN Y ADAPTACIÓN

Norway electric car market

- Long term fiscal incentives from 1990s
- Incentives added sequentially until the market responded.
- The price difference between BEV and petrol car can be €1,000.
- Exempt from
 - vehicle registration tax
 - road tolls
 - VAT (normally 25%)
- Bus lane access
- BEVs -reduced annual tax
- Reduced rates on the main coastal ferries

B8: ESTRATEGIAS Y ACTUACIONES DEL NORTE Y CENTRO DE LA UE: EVALUACIÓN Y ADAPTACIÓN

Vehicle eco-label

Recommendations

- Mandatory EU wide scheme
- NOx, PM and CO₂ emissions, with no weighting
- Apply to new & used vehicles
- To take account of real-world emissions
- ‘Well to tank’ to enable ICEs and EVs to be compared
- Based on domestic appliances label (A to G rating) with running costs.
- Updated on annual basis by allocating a fixed percentage of models to each band.
- Long term public education is required to support the eco-label
