Other Site Characteristics

La franja litoral de la ZEC está constituida principalmente por acantilados, que se encuentran sometidos a la acción del medio marino.

4.2 Quality and importance

Espacio muy importante para el HIC 1170 Arrecifes. Constituye una formación rocosa continúa que presenta un gradiente ecológico en profundidad bien conservado, con una elevada biodiversidad de especies bentónicas, algunas de las cuales conforman densas poblaciones. Estos fondos rocosos albergan especies amenazadas tales como *Patella ferruginea*, *Astroides calycularis*, *Paramuricea clavata* o *Dendrophyllia ramea*. La zona emergida se encuentra sometida a una influencia marina (acción directa por las olas, salpicaduras y aerosoles marinos) que determina la presencia de hábitats de interés comunitario que necesitan la interacción tierra-mar como es el caso del HIC 1240.
