

WHAT IS MARINE LITTER?

It is solid waste elaborated by human beings that, for different reasons, ends up abandoned in marine or coastal environments.

YOU KNOW THAT...

Marine litter is a global problem as important as **Climate Change**, ocean acidification and the loss of biodiversity. **10 millions tonnes of waste arrive annually in the ocean and seas;** especially plastic waste.

20% of marine litter is the **result of marine activities** such as fishing and marine transport.

The main solution is to prevent it from happening and not just to clean.

The costs of beach and ocean clean-ups are borne by everybody and could be used for other necessities.

More than **1 million sea birds and 100.000 marine mammals and turtles** die each year on becoming entangled or ingesting marine litter.

80% of marine litter originates on land. Abandoned waste is moved by the wind and the rain even if you live inland. Everything you throw down the WC can end up in the sea, becoming marine litter.

PARTICIPANT ENTITIES:

Decalogue developed by the Working Group on Marine Litter of CONAMA 2016

Citizen Decalogue against marine litter

You are part of nature; on the ground
just leave your footprints and in the sea your wake.

WHAT CAN YOU DO?

1.
Think globally, act locally and take personal responsibility.
Our behaviour is essential to prevent marine litter.

2.
Throw hygienic products in the bins, never in the WC.
Cotton buds, wet wipes, sanitary towels and other similar products can damage the sewer system and can end up in the sea, causing serious environmental problems and clogging fishing nets.

3.
If you like fishing, be careful with your fishing gear.
If it is lost in the sea, marine sea life can become trapped in nets and lines or even ingest the hooks

4.
Be responsible with your consumption: Find out and make a decision.

5.
Apply **the 3R rule** in your consumption habits
-Reduce, Reuse and Recycle- and you will be helping to minimize marine litter, which on many occasions originates in your house.

6.
Enjoy nature in a responsible manner.
Don't leave your cigarette butts, packaging or any other waste behind on the beach, in the rivers or sea.
Always bear in mind where you will deposit your rubbish.

7.
Join Citizen Science
To prevent waste, it is necessary to know, and everybody can contribute to knowledge about marine debris in a simply way.
Being a scientific citizen means helping to know better about quantity, types and areas of accumulation of marine litter.
Get informed through the Spanish Marine Litter Association.
www.aebam.org

8.
You can pick up some waste found during your walks along the coast or **you can join local beach clean-ups**

9.
Educate children and young people to respect nature and, through your example, you will **influence your friends and partners to prevent** the abandonment of waste.

10.
When you go sailing, don't throw your waste in the water.
Collect it and dispose of it in the appropriate places in the port
